

PilotSafe Obstruction Light

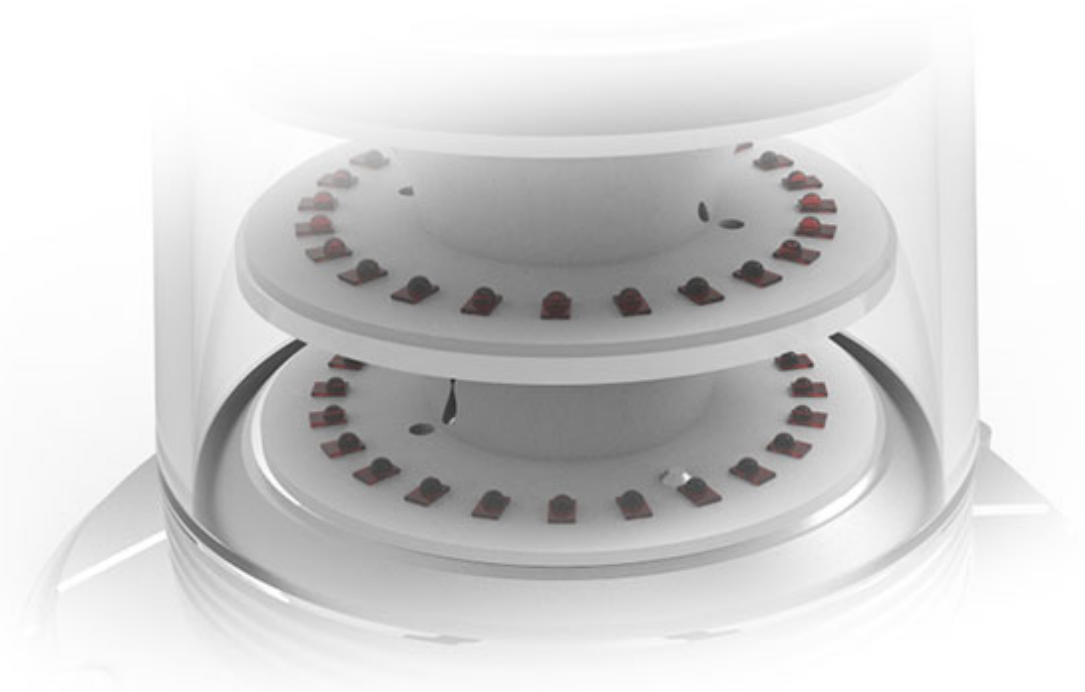

[i Product Info](#)[☰ Technical Specifications](#)[↓ Download](#)[🖼 Gallery](#)[🎥 Video](#)[🔄 360 view](#)

The PilotSafe is an ideal obstruction light for FAA and ICAO applications including towers, turbines, buildings, airports etc. With unmatched brightness combined with its waterproof, shockproof and dustproof design it's the best choice for use in very tough environments.

FEATURES

48 High brightness LEDs for OBSTRUCTION STROBE 360° coverage

The PilotSafe™ obstruction light incorporates 48 of the brightest LEDs available in the world today, with chromaticity and intensity compliant with all international safety standards. The optical performance is incredible, and Aveo's PilotSafe line of products are the ideal replacement unit for any obstruction light system in existence. Unlike our competitors, we continually introduce upgraded versions due to the industry's rapidly changing LED technology, so you will never see older, obsolete LEDs in Aveo lights as you do with other suppliers who are still using low efficiency, low output, less reliable LEDs from 5 to 7 years ago!

Available in RED or WHITE LED colors

This light features highly polished reflectors and is available in red or white color.

Low-drag form factor & design

Aveo lights feature the lowest drag coefficient in the industry as proven in CFD analysis on the University of Michigan Cray Computer cluster.

No separate strobe power box needed

Aveo pioneered the first design requiring no external power supply straight from its inception in the industry and the copycats have yet to match our exclusive circuitry. Quite simply it's the lowest weight solution you can get, in 9 to 36 volt input range too!

2 Different bases

PilotSafe comes with two different bases to match your needs.

Waterproof / Shockproof / Dust-proof

All Aveo lights are waterproof, dust proof, and inert to most environmental conditions as they are all tested to categories of DO-160 exceeding the applicable requirements by far in external laboratories experienced in compliance demonstration of EASA ETSO and FAA TSO appliances.

Three year warranty

3 year warranty on materials and workmanship.
