TPM RANGE

The TPM range are in the form of a Synthetic Resin Bonded Paper tube hermetically sealed at both ends with resin . Axial terminations are via M5 x 12mm studs or tinned copper wire.

SPECIFICATIONS

They are impregnated and filled with a mineral oil. The container is a Synthetic Resin Bonded Paper tube sealed at both ends with resin assuring hermetic sealing. The capacitors are terminated with M5 x 12mm studs or tinned copper wire.

NOTE: The impregnant used is a non toxic highly purified and inhibited mineral oil.

Capacitance Range: 0.0005 μ F – 2 μ F. The tolerance is +/-10%. Other tolerances are available on request. Nominal values measured at 1kHz.

Temperature Range: -55°C to 85°C. The nominal voltage rating is applicable from -55°C to 85°C.

Temperature Coefficient: Capacitance will increase by 2% per 100°C temperature rise.

Voltage Range: 1kV – 100kVDC.

Note: The impregnant used is a non-toxic highly purified and inhibited mineral oil.

APPLICATIONS: The TPM range of capacitors are specifically designed for high voltage filters and can be successfully used in the following applications. High Voltage Smoothing; Induction Heating; RF Transmitter Power Supplies; X-Ray Power Supplies.

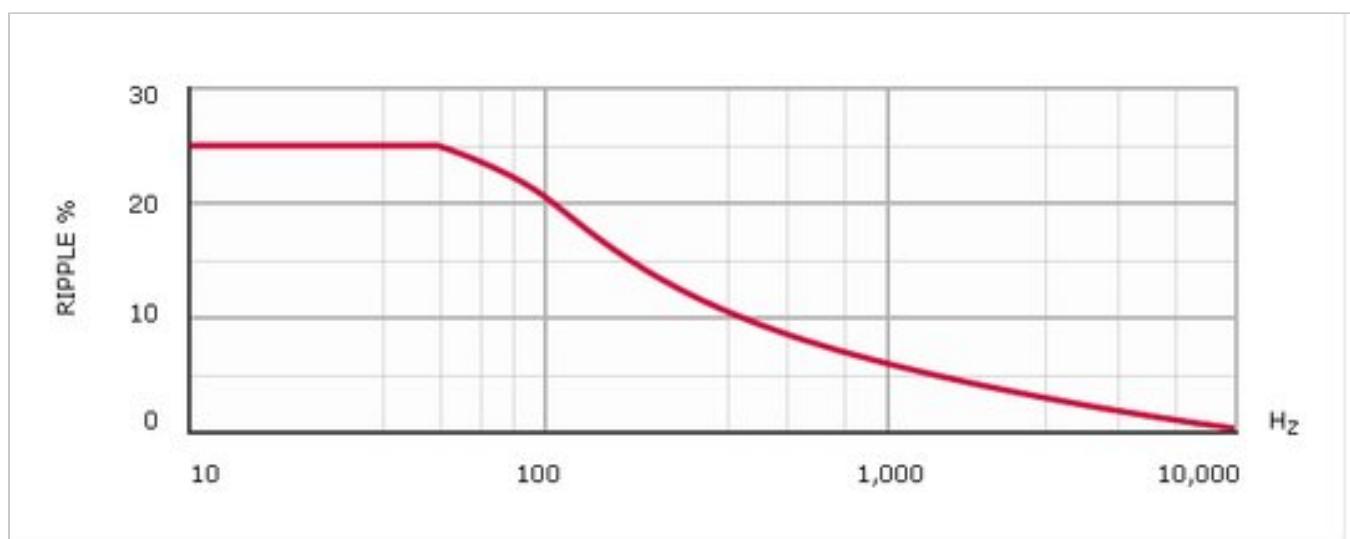

Capacitance Range: 0.001 μ F – 2 μ F. The tolerance is +/-10%. Other tolerances are available on request. Nominal values measured at 1kHz.

Temperature Range: -40°C to 85°C. Derating is required for higher operating temperatures.

Temperature Coefficient: Capacitance will increase by 2% per 100°C temperature rise.

Voltage Range: 1kV – 100kVDC

RIPPLE:

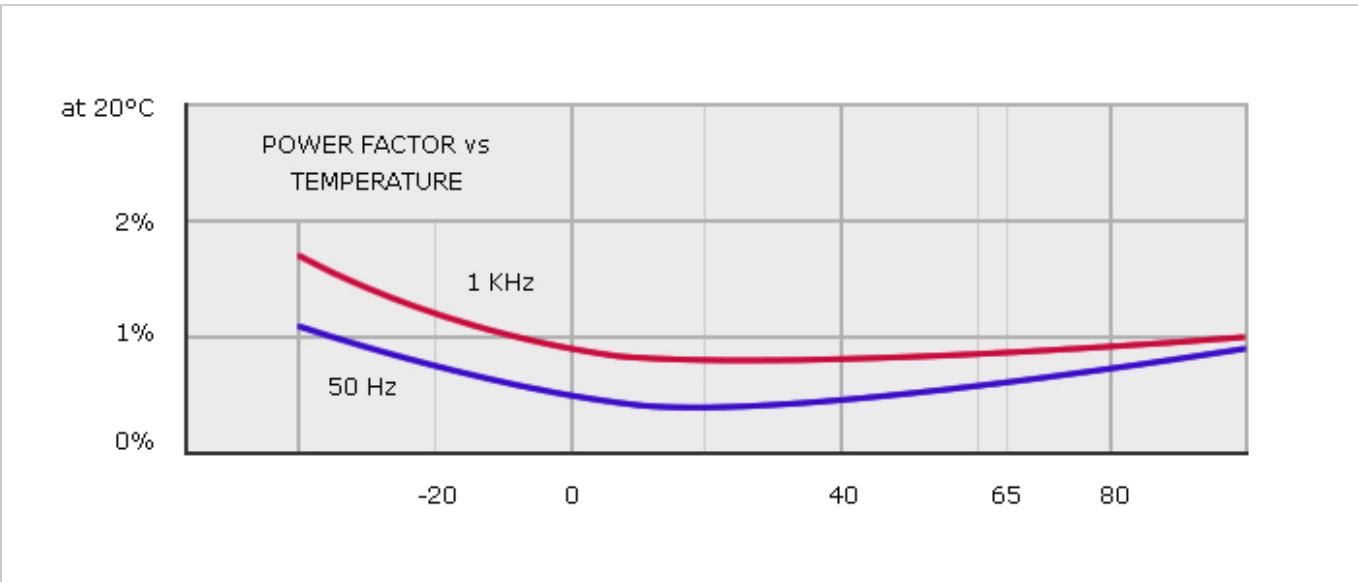

The sum of the peak ripple voltage and the DC voltage should not exceed the rated voltage. Refer to graph fig 1 for permissible peak-to-peak ripple voltage as a percentage of rated voltage for various frequencies.

Test Voltage: V Test

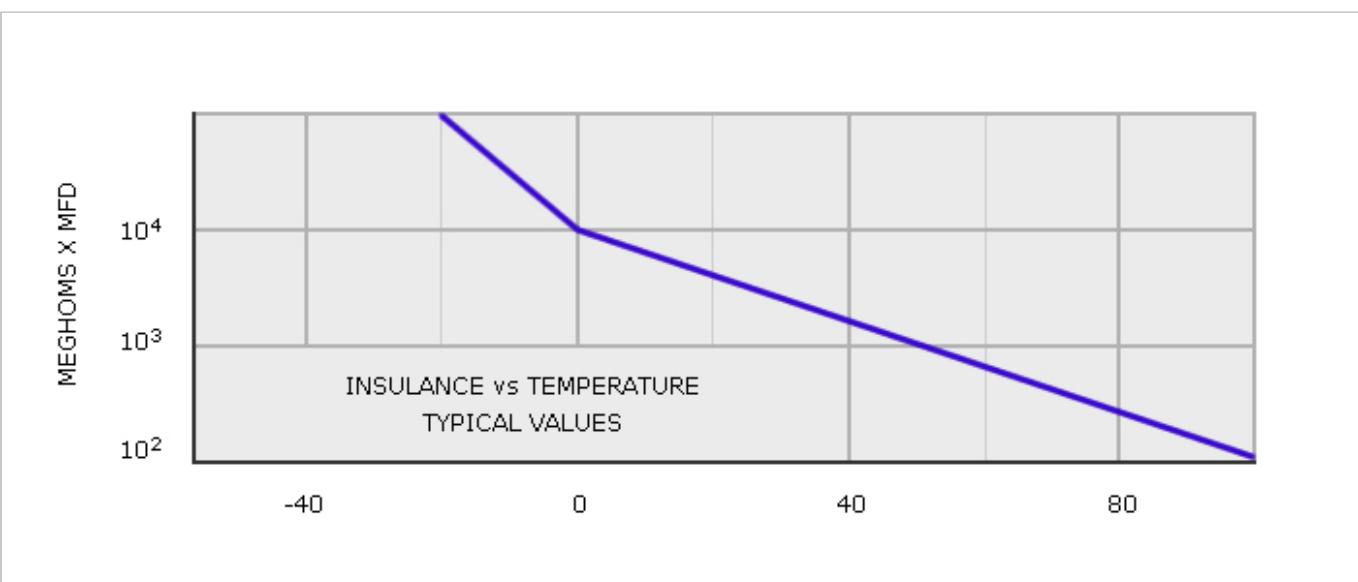

For DC rating <20kV:	V Test = 2.0 x Rated Voltage for 1 minute.
For DC rating \geq 20kV:	V Test = 1.5 x Rated Voltage for 1 minute.
Case to terminal Test voltage = V Test + 1kV	

POWER FACTOR

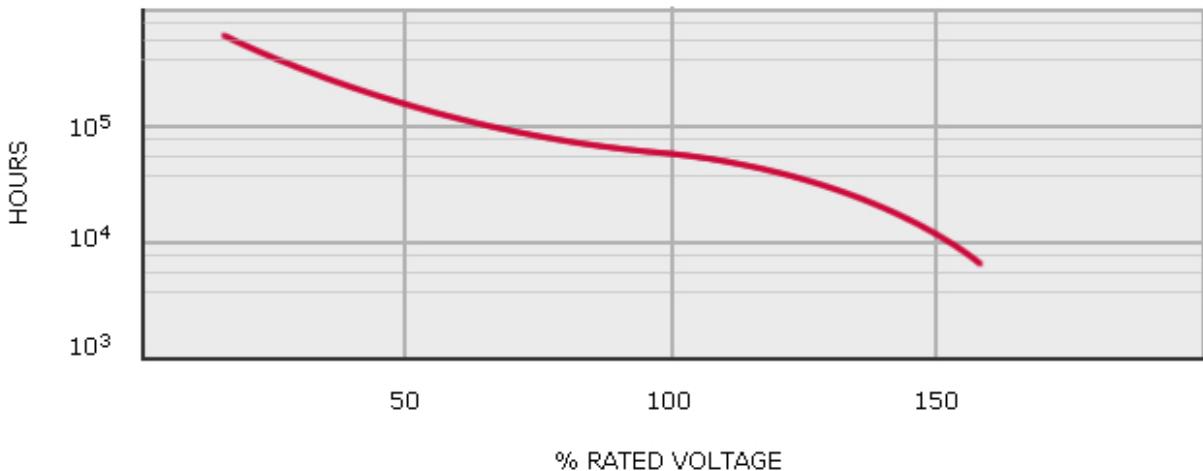

Power Factor: Variable; function of temperature and frequency. See fig 2. Nominal value < 0.5% at 20°C.

DIELECTRIC RESISTANCE

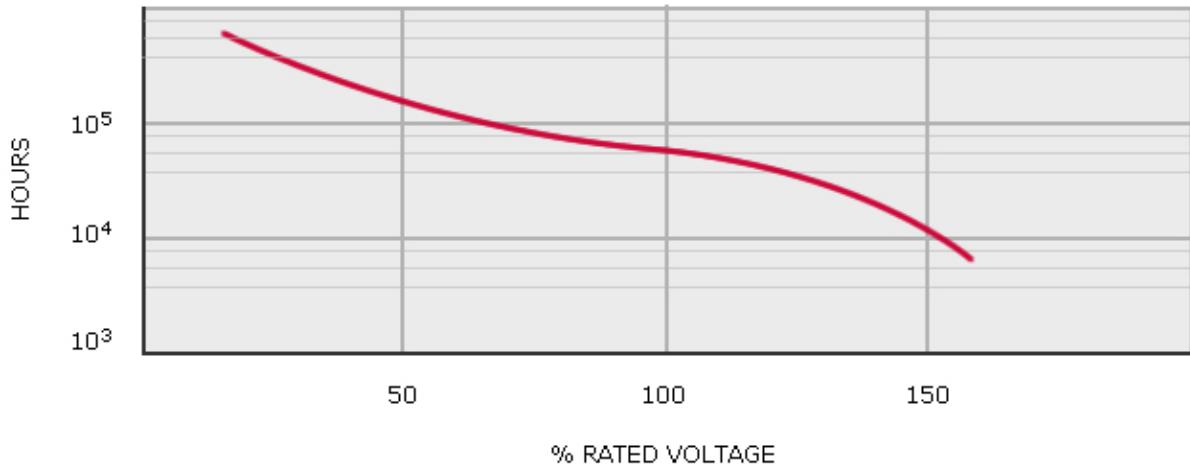

Dielectric Resistance: (Parallel resistance) Indicated by the graph of insulation (Mohms x μ F) vs Temperature (fig 3). The insulation(Mohms x μ F) is nominally 10000s at +20°C. (Measurements taken after 1 minute with an applied voltage of 500V).

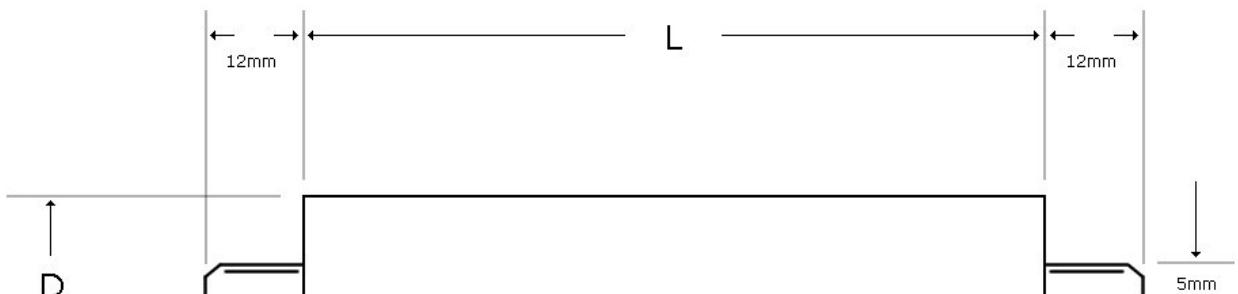

LIFE EXPECTANCY

Life expectancy: TPM type capacitors are designed for a life expectancy of 50000 hours at 65°C. To achieve the same life expectancy at 85°C derate to 60% of rated voltage.
